

Applications of Fiber Optic Cable Types

Overview

Fiber Optic Cable Types: A Complete Guide Here's everything you need to know about the various fiber optic cable types, what makes them so useful, and what.

Key Takeaways

Fiber optic cables are used in telecommunications, internet backbones, data centers, sensing, medical imaging, industrial systems, and 5G networks, and they come mainly in two types: single-mode (OS1/OS2) for long-distance high-bandwidth links and multimode (OM1-OM5) for shorter, high-speed connections.

1. Main Applications of Fiber Optic Cables

Telecommunications & Internet Backbone

- Long-haul networks and submarine cables use single-mode fiber for extremely long distances with minimal loss.

- FTTH (Fiber to the Home) for broadband access.

Data Centers & LAN

- Multimode OM3/OM4/OM5 fibers used for server-to-switch links (10–400 Gbps).

Mobile Networks (4G/5G)

- Fiber-to-the-antenna (FTTA) for tower connections and backhaul.

Industrial & Military Systems

- Used where EMI immunity is critical; ruggedized multimode or POF (Plastic Optical Fiber).

Medical Imaging

- Specialized silica or multimode bundles for endoscopy and illumination.

Sensing (Structural, Oil & Gas, Smart Infrastructure)

- Fiber Bragg gratings and distributed sensing for strain, temperature, and pressure monitoring.

2. Types of Fiber Optic Cables

A. Single-Mode Fiber (SMF)

- Core size: 8–10 μm
- Standards: OS1 (indoor), OS2 (outdoor/long-distance)
- Distance: Up to 100 km+
- Applications: Telecom backbone, undersea cables, FTTH, long-haul ISP networks.

B. Multimode Fiber (MMF)

- Core sizes: 50 μm (OM2–OM5), 62.5 μm (OM1)
- Standards: OM1–OM5

- Applications: Data centers, LAN, SAN, short-range high-speed links.

Multimode Types Comparison	Type	Core	Jacket	Max 10 Gbps Distance	Light Source	Use
Case OM1	62.5 μm	Orange	33 m	LED	Legacy LAN	OM250 μm Orange 82 m LED Basic
LAN OM3	50 μm	Aqua	300 m	VCSEL	Modern data centers	OM450 μm Aqua 550 m VCSEL
High-performance DCOM	550 μm	Lime	150 m	(SWDM)	VCSEL	SWDM, future upgrades

C. Specialized Fiber Types

- Plastic Optical Fiber (POF): Large core (0.5–1 mm), used in automotive, industrial automation.
- Sensing-grade fibers: For distributed temperature/strain monitoring.

3. Cable Construction Types

- Tight-buffered: Indoor use, patch cords.
- Loose-tube: Outdoor, long-distance, moisture protection.
- Armored: Burial and harsh environments.
- Ribbon fiber: High-density data center installations.

4. Summary

Fiber optic cables enable high-speed, long-distance, and interference-free communication across telecom, data centers, sensing, medical, and industrial sectors. The primary types—single-mode and multimode—are selected based on distance, bandwidth, and environment requirements.
