

Are there different types of optical splitters for mobile and telecom operators

Overview

Fused Biconical Taper (FBT) and Planar Lightwave Circuit (PLC) splitters are two dominant technologies, each with distinct strengths tailored to varying network scales and requirements. In this guide, you'll learn how fiber splitters function in PON networks, the difference between PLC and FBT types, and how to choose the best model for your rollout in 2025. What Are Fiber Optic Splitters in PON?

Fiber splitters are passive devices that divide one optical input signal into. By dividing a single optical signal from a central Optical Line Terminal (OLT) into multiple outputs for Optical Network Terminals (ONTs) at users' homes, splitters eliminate the need for dedicated fibers to each residence—slashing infrastructure costs while scaling network reach. What Is an Optical Splitter Fiber and Why Do You Need One?

At its core, an optical splitter fiber is a device.
