Key Takeaways

CAD cable tray designation involves identifying tray types, sizes, and installation components in CAD drawings using standardized blocks or BIM models. Overview of Cable Tray Designation in CAD

In CAD systems, cable trays are designated based on tray type, material, size, and configuration. Common types include:

- Ladder trays: Open structure with rungs for supporting cables.
- Perforated trays: Solid bottom with holes for ventilation and cable support.
- Solid-bottom trays: Fully enclosed base for protection against dust or liquids.
- Wire mesh trays: Flexible mesh design for lightweight cable routing . Each tray type can be represented in CAD using blocks or 3D models in formats such as DWG, DXF, STEP, STL, or Revit RVT . These blocks often include top, front, and side views, along with support components like wall brackets, ceiling hangers, vertical risers, elbows, tees, and reducers .

CAD File Formats and Tools

- AutoCAD DWG/DXF: Widely used for 2D and 3D electrical layouts, including cable tray blocks .

- Revit RVT: BIM files for 3D modeling and integration with building information systems .
- STEP/IGES: Neutral 3D formats for interoperability across CAD platforms .
- Bentley DGN and Intergraph Smart 3D: Used for industrial plant design and visualization .

Designation Practices

Cable tray designation in CAD typically includes:

- Tray Type Code: Ladder (LD), Perforated (PF), Solid (SB), Wire Mesh (WM).
- Width and Depth: Standardized dimensions in millimeters or inches.
- Material: Aluminum (AL), Steel (ST), Stainless Steel (SS), Fiberglass (FG).
- Routing Components: Elbows (EL), Tees (TE), Reducers (RD), Vertical Risers (VR).

These designations allow engineers and designers to quickly identify tray specifications in drawings and coordinate installation details efficiently .

Accessing CAD Cable Tray Libraries

Several online resources provide free or supplier-certified CAD files:

- TraceParts: Offers CAD models in multiple formats for various tray types .
- Bibliocad: Provides AutoCAD blocks with installation details .
- LineCAD: Comprehensive DWG blocks including support systems and routing components .
- ABB T&B Design Tools: Revit, AutoCAD, STEP, and Bentley files for industrial and commercial projects .
- Libreriacad: Free DWG and CAD block downloads for cable trays . Using these libraries ensures standardized designation and accurate representation in CAD drawings, facilitating design, coordination, and construction documentation.
