

Cable Management Rack for Communication Equipment

Overview

A cable management rack is designed to route, protect, and organize copper and fiber cables inside network cabinets. Beyond keeping cables tidy, a well-structured cable manager reduces cable stress, improves heat dissipation, and ensures bend-radius compliance for data. Belden offers a complete line of open frame racks and cabinets that support all applications, from single-rack or cabinet applications (such as retail and telecom closets) to high-density, multi-rack/multi-cabinet patching and switching fields (in computer rooms, data centers and central offices). These cables handle critical circuits that must stay up and running. But with this growth of capability come a parallel growth of discrete data communications and power cabling. Rack Cable Manager by Unisol is a robust and efficient cable organizing solution crafted for managing network cabling in data centers, telecom rooms, and enterprise server environments.
