

Fiber optic router setup pricing

Overview

How Much Does It Cost to Get Internet Installed?

[2025 Data]Cost Overview: Professional internet installation costs between \$250 and \$1,125, with homeowner.

Key Takeaways

Setting up a fiber optic router typically costs between \$250 and \$1,125 for home installations, with total fiber installation ranging from \$1,000 to \$5,000 depending on complexity. Equipment and Router Costs

The cost of a fiber optic router itself can vary widely depending on speed, features, and brand. Basic routers for small homes may cost around \$160, while high-performance routers for larger homes or multi-level setups can reach \$700 or more. Some internet service providers include the router in the installation package, while others charge a separate equipment fee, often around \$99 for setup .

Installation Costs

Installing fiber optic internet involves running fiber cable from the curb to your home and connecting it to the router. Typical home installations range from \$1,000 to \$5,000, with most standard projects falling between \$2,000 and \$3,500 when access is straightforward and equipment is included . Factors affecting cost include:

- Home layout: Multi-story homes or long indoor runs increase labor and materials costs.

- Access to the curb: Easier access reduces installation time and cost.
- Existing conduits: Using pre-existing pathways lowers expenses.
- Permits and restoration: Trenching, wall repairs, or permits can add \$20-\$100 or more . Per-unit costs for fiber drops and in-wall routing typically range from \$2 to \$6 per linear foot, depending on complexity and fiber type .

Labor and Professional Setup

Professional installation is recommended for optimal performance. Contractors usually charge \$50 to \$100 per hour, with residential setups taking 1-3 hours on average . Larger or more complex homes may require multiple access points to ensure consistent Wi-Fi coverage, which can increase labor and equipment costs.

Summary of Typical Costs

Component	Price Range
Basic router	\$160-\$300
High-performance router	\$400-\$700+
Fiber installation (standard home)	\$1,000-\$3,500
Complex installation (multi-story, long runs)	\$3,500-\$5,000+
Professional labor	\$50-\$100/hour
Permits or minor restoration	\$20-\$100

Tips to Reduce Costs

- Bundle services with your ISP to potentially waive setup fees.
- Use existing conduits or pathways to minimize labor.
- Obtain multiple quotes to compare total costs, including equipment and activation fees.
- Consider staged installations for larger homes to spread out expenses . Overall, the total cost for a fiber optic router setup depends on equipment choice, home layout, installation complexity, and professional labor, with most homeowners paying \$2,000-\$3,500 for a standard installation including the router.
