

Furthest PoE power supply switch

Overview

The max PoE distance over Ethernet is 100 meters (328 feet) between a PoE power sourcing equipment (PSE) port and a powered device (PD). Power over Ethernet (PoE) allows devices like IP cameras, VoIP phones, WiFi access points, and IoT sensors to receive power and data over standard Ethernet cabling. This can lead to unstable. In practical applications, if the power demand of a device exceeds the single port output capability of a PoE switch (such as 90W for PoE++), the voltage drop problem will further compress the effective power supply distance. The implicit impact of equipment performance and wire quality Switch. Power and data can be delivered simultaneously over Ethernet connections, thanks to a ground-breaking technology called Power over Ethernet (PoE). This approach greatly lowers expenses while streamlining network equipment installation and cabling. However, one common challenge faced by network.
