

## Low-voltage American-style distribution box

### Overview

American-style box transformers are integrated prefabricated power distribution equipment with a compact structure and small footprint, allowing direct outdoor installation. They are fully prefabricated and tested in the factory, enabling fast on-site construction and convenient. American-style box-type substation (prefabricated substation) is a compact complete set of power distribution equipment that integrates electrical components such as high-voltage switchgear, distribution transformers, low-voltage switchgear, and electric energy metering devices into one or more. This new box-type power substation from our company serves as a vital power supply unit within cable distribution networks. Integrating high-voltage control, protection, transformation, and distribution functions into a compact, pre-assembled solution, it's widely used in urban and rural power. The ZGS Series American-style Box-type Prefabricated Substation utilizes Schneider-authorized modular manufacturing. Featuring a compact design with only one-third the footprint of European-style substations of equivalent capacity, it offers space-saving advantages.

- The transformer and switchgear are housed within the same oil tank, eliminating the need for a traditional.
