

Om3 Fiber Optic Transmission Distance Standard

Overview

OM1-OM5 multimode fiber standards, detailing their core sizes, jacket colors, transmission capabilities and more.

Key Takeaways

OM3 fiber optic cable supports 10G Ethernet up to 300–400 meters, 25G Ethernet up to 70 meters, and 40G/100G Ethernet up to 100 meters.

OM3 is a laser-optimized multimode fiber (LO-MMF) with a 50/125 μm core and an effective modal bandwidth of 2000 MHz·km at 850 nm, designed for high-speed data transmission using VCSEL lasers . Its main advantage is supporting short- to medium-range high-speed connections in data centers, enterprise networks, and campus environments.

Transmission Distances by Data Rate

- 10G Ethernet: OM3 can reliably transmit up to 300–400 meters under standard conditions .
- 25G Ethernet: Maximum distance is approximately 70 meters .
- 40G Ethernet: Supports up to 100 meters using parallel optics .

- 100G Ethernet: Also limited to 100 meters with parallel optics . These distances assume factory-terminated connectors, clean links, and no intermediate splices. Modal dispersion, rather than signal attenuation, is the primary factor limiting distance .

Practical Applications

OM3 fiber is commonly used for:

- Top-of-Rack (ToR) to aggregation switch connections (10–100 meters)
- Enterprise backbone links between floors or network closets
- High-speed server interconnects within data centers
- Parallel optics for 40G and 100G Ethernet deployments While OM3 remains cost-effective and widely deployed, OM4 fiber offers longer distances and higher bandwidth (4700 MHz·km), making it preferable for future-proofing high-speed networks .

Key Considerations

- Modal dispersion is the main limiting factor; higher data rates reduce maximum distance.
- Clean installation and proper connectors are critical to achieving rated distances.
- For distances beyond OM3 limits, consider OM4 or single-mode fiber for longer reach. In summary, OM3 fiber is ideal for short- to medium-range high-speed Ethernet, with maximum distances ranging from 70 meters for 25G to 400 meters for 10G, making it suitable for most data center and enterprise applications .
