

Relay Protection Testing Machine

Overview

Relay Test Kit is an advanced diagnostic tool designed for testing and calibrating protection relays in power systems. Suitable for field and lab use, it offers precise current and voltage output, user-friendly interface, and automated test sequences. Our relay test and management software (RTMS) has a solution available for any job requirements, exceeding your expectations. With Megger as your trusted partner, you can overcome the most complex of relay protection test challenges. Its powerful six current sources (three-phase mode: up to 64 A / 860 VA per channel) with a great dynamic range, make the unit capable of testing even high-burden electromechanical relays with very. The DDG Primary Current Injector Test Set is a high-current test device used to generate controlled large currents for safety testing, CT calibration, temperature-rise and. The power operation department uses microcomputer relay protection testers to regularly calibrate and maintain the. More than 20 years of experience in developing and manufacturing automatic relay test systems have gone into creating the fourth generation of ARTES test instruments. 8 kg and offers 4x300V and 6x20A outputs. Ideal for substations, electrical contractors.
