

TD Router Fiber Optic Setup

Overview

Fiber Internet | Self-Setup | TDSNeed instructions on how to set up your fiber Internet service?

Look no further. Watch the video to give you step-by-step.

Key Takeaways

Setting up your TD router for fiber optic internet involves connecting the Optical Network Terminal (ONT) to your router, powering the devices, and configuring Wi-Fi through the router's app or web interface. Step 1: Locate and Connect the ONT

The Optical Network Terminal (ONT) is the device that connects your home to the TDS fiber network. It is usually installed in a utility closet, laundry room, near your electrical panel, or sometimes outside near your gas/electric meter. Ensure the ONT is plugged into a power outlet. If your ONT is outside, you may instead use an ethernet wall jack inside your home .

Step 2: Connect Your Router

- Use an Ethernet cable to connect the ONT (or wall jack) to your router. If your router has multiple ports, use the first port labeled WAN or Internet .

- Plug the router into a power outlet using the supplied power cord. The status light should start flashing, indicating it is powering up .

Step 3: Configure Wi-Fi

- For routers like the eero system, download the eero Home Wi-Fi System app from your smartphone's app store. Follow the in-app instructions to complete setup, including naming your network and setting a password .
- For routers like the TP-LINK TD-W8970, access the router's web interface by typing 192.168.1.1 into a browser. Log in with the default username and password, navigate to Wireless Settings, and configure your Wi-Fi mode and security key. Save changes to activate the network .

Step 4: Optional Advanced Settings

- TDS fiber service does not require a separate modem; the ONT handles the connection .
- You can use any wired or wireless router, but a Wi-Fi 6 router is recommended for optimal coverage and speed .
- If you want to extend your network, the TD-W8970 supports repeater mode, allowing it to amplify an existing Wi-Fi signal .

Step 5: Verify Connection

- Once setup is complete, check that your devices can connect to the internet.
- Ensure the router's status lights indicate a stable connection.
- For troubleshooting or additional guidance, TDS provides a setup video and support page at tdstelecom.com/fibersetup . By following these steps, your TD router should be fully configured for fiber optic internet, providing fast and reliable connectivity throughout your home.
