

The distribution box is equipped with double doors

Overview

A double door distribution board , also known as a double door consumer unit or distribution box, is an electrical enclosure used to house the electrical wiring and protective devices for a building's electrical system. It is an essential component of the electrical distribution system and serves. ● Stainless Steel Distribution Box with Inner-Outer Door is constructed by bending and welding SUS304 stainless steel plates, featuring an inner door design and a double-sloped top. These boxes are mainly used in outdoor and indoor environments, which may be subject to many environmental elements and water exposure. They are also certified. The Double Door IEC Electrical Box is an essential solution for housing electrical equipment and power distribution components in industrial, commercial, and outdoor settings. Built to IEC 60529 standards, it provides optimal protection against dust, water, and mechanical damage.
