

Why is my KVM switch not sending a signal

Overview

How KVM Switches Handle Audio (HDMI, VGA, USB) Your KVM switch passes both video and audio through the HDMI cable (or DisplayPort cable).

Key Takeaways

Incorrect adapters or mismatched ports can prevent signal transmission. Confirm that the KVM's video input matches the computer's video output and that adapters are compatible. Problem 5: The output resolution is not right using the KVM switch. Each monitor. An issue I keep having is that when I switch between systems I often get a "no signal - DP not found" message and a black screen. I tried to switch between inputs. I have a Laptop that is also connected to the. In many cases, display detection issues are caused by a combination of monitor communication behavior, cable limitations, switching timing, and compatibility between devices. Also AFAIK passive HDMI/DVI (source) to DP (sink) connection is not standardized, so the fact its DP ports can accept HDMI/DVI source is probably some "proprietary" trick/hack.
