## Wind power generation fiber optic distribution cabinet with low temperature resistance

### Overview

SEDI-ATI has developed built-in fiber optic assemblies consisting in a ruggedized dielectric multi-fiber optic cable assembly.

### Key Takeaways

VarioConnect and WINDLINK fiber optic cabinets provide modular, vibration-resistant, and low-temperature-tolerant solutions for wind power applications. Key Features for Wind Power Applications

**Vibration and Environmental Resistance:** Wind turbines generate significant vibration and are exposed to extreme weather. Cabinets like VarioConnect splice boxes use DIAMOND E2000 connectors, which are vibration-resistant and maintain reliable connections even under movement and harsh conditions . These connectors also include integrated laser protection for ring topology networks. **Low-Temperature Operation:** Certain fiber optic solutions, such as Nexans WINDLINK cables and cabinets, are specifically designed for ultra-low temperature environments, ensuring reliable performance in cold climates . Materials used in these cabinets and cables are resistant to oil, UV, ozone, and abrasion, which is critical for outdoor wind turbine installations. **Modularity and Fiber Capacity:** Cabinets are available in modular 1U or 19" rack configurations, supporting up to 288 fibers with pull-out modules, or compact 1U versions for 72-96 fibers . This modularity allows for flexible deployment in control cabinets, nacelles, or onshore wind farm technical rooms. **Electrical Isolation and EMI Protection:** Industrial fiber optic products for wind generation provide high voltage and current isolation, protecting sensitive monitoring and control systems from electromagnetic interference (EMI) generated by power electronics like inverters and rectifiers . This ensures stable data transmission for turbine monitoring and control. **Installation and Maintenance:** Many cabinets feature rear cable management (30°/45°/90°) and pre-connectorized modules, simplifying installation and maintenance in confined spaces within wind turbines . Some systems also offer metalized shielding for additional protection in energy-dense areas.

#### Recommended Solutions

- VarioConnect Modular Splice Boxes: Ideal for vibration-prone environments, available in modular or fixed configurations, supporting 72-288 fibers with DIAMOND E2000 connectors .
- Nexans WINDLINK Cabinets and Cables: Designed for ultra-low temperatures, flexible, halogen-free, and suitable for industrial Ethernet and control systems in wind turbines .
- Multilink 5000/6000 Series Cabinets: Powder-coated aluminum enclosures with modular options, suitable for outdoor mounting and low-temperature operation, with customizable fiber management and protection .

#### Conclusion

For wind power generation systems in cold climates, fiber optic distribution cabinets must combine vibration resistance, low-temperature tolerance, modularity, and EMI protection. Solutions like VarioConnect, WINDLINK, and Multilink modular cabinets meet these requirements, ensuring reliable fiber connectivity for monitoring, control, and energy transmission in harsh wind turbine environments .
